

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

200 Words A Minute

The record of an eighteen-year-old boy in the recent shorthand speed contest held by the National Shorthand Reporters' Association.

Mr. Albert Schneider, winner of the N. S. R. A. Speed Certificate for writing at two hundreds words a minute for five minutes on **literary matter**, was graduated from the New York City High School of Commerce in February, 1918.

While many of the fastest shorthand writers in the country participated in the recent contest in Detroit, only four other writers, all of whom were much older than Mr. Schneider, were successful in writing and transcribing the two hundred word literary matter "take." In fact, during the entire history of the N. S. R. A. Shorthand Speed Contests, only twelve other writers, all with many times the experience of Mr. Schneider, have succeeded in turning in qualifying transcripts at two hundred words a minute on **literary matter**.

The achievement of this youthful writer is only one more instance of the efficacy of Gregg Shorthand as a reporting instrument—the instrument used by the younger generation of shorthand reporters.

Gregg Shorthand is taught exclusively in over 80 per cent of the schools of the country.

Rational Typewriting Wins World Championship

In the recent International Typewriting Speed Contest held in New York City, the World's Championship was won by Mr. William F. Oswald, who was trained by the RATIONAL method. In one hour's writing from plain copy, Mr. Oswald wrote a gross of 8,383 words with but 49 errors. His net speed per minute, after deducting ten words for each error, was 132 words. Mr. Oswald was also winner of the Amateur Championship in 1915 and of the American Championship in 1916.

OTHER RATIONAL WINNERS

More expert operators have obtained their early training by the "Rational" way than by any other method. Other "Rational" winners were

H. O. Blaisdell, Championship for 1910 and 1911.
Emil A. Trefzger, Championship for 1914.
J. L. Hoyt, Amateur Championship for 1910.
Gus L. Trefzger, Amateur Championship for 1911.
Emil Trefzger also won the English Championship for three years in succession.

THREE EDITIONS

Rational Typewriting, Revised Edition, by Rupert P. SoRelle and Ida McLenan Cutler. Comprehensive course designed for use in high schools and private business schools where an extensive course is desired. Cloth binding, end opening. 186 pages.....\$1.00

JUST PUBLISHED

Place's Beginning Latin

By PERLEY OAKLAND PLACE, Litt. D.

Professor of Latin, Syracuse University

416 pages. Interestingly illustrated with line cuts and half tones. Five full pages in color.

This is a new type of first-year Latin book. It meets the requirements of recent syllabuses and the recommendations of the Committee on Classical Languages of the National Education Association.

Besides giving a solid foundation in Latin, this book accomplishes these results:

1. Justifies the time devoted to Latin study.
2. Emphasizes the relation of Latin to English.
3. Develops a better knowledge of English.
4. Shows Roman life as compared with the life of today.
5. Provides a background that will give a new meaning and vitality to Latin study.

HIGH SCHOOL SONG BOOK

Edited by GERTRUDE B. PARSONS,
Head of the Department of Music,
Polytechnic High School, Los Angeles, Cal.

A refreshingly varied repertoire of just the kind of songs needed for group singing—songs of rousing character. Every school generation should know the familiar "old songs." Take this opportunity to give them also new material to enlarge their musical heritage. Accompaniments are included for all songs unless the voice parts are sufficient for musical completeness.

Folk songs, community and patriotic songs.
Sacred choruses, hymns, and songs for special occasions.
Part songs and choruses.
Selections from the operas.

Appearance of the Appeal

MANY expert advertising men will not accept Sales Letter accounts unless the firm's Letter Head has been correctly designed and printed. The Sales Letter never knocks at a business man's office, nor waits outside for admittance. With this advantage the printed salesman should present a first blush appearance in keeping with its message. A poorly planned and printed Letter Head will rob a good Sales Letter of 50 per cent of its pulling power.

Appearance, plus quality, plus service, is wrapped with every package of printing that bears the little "Seaman" symbol. Correspondence invited.

Hackeling Tellurian

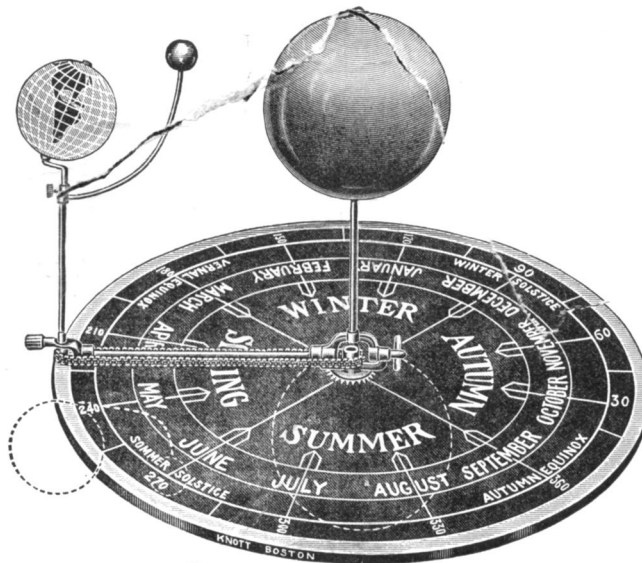

No. 49-90

Invented by the Late Dr. Herman A. Hackeling

THE object of the Hackeling Tellurian is to provide the student and teacher of Physical Geography or Astronomy with a working model which will demonstrate the axial rotations of the Earth and Moon, their combined revolution about the Sun, and the important phenomena which result from these motions.

APPROVED BY NEW YORK CITY BOARD OF SUPERINTENDENTS

Patent No. 858,977, Issued July 2, 1907

THE sun is represented by the large central, gilded sphere about which the earth-moon system can rotate by means of the horizontal arm close to the base. The wire which acts as rotation axis of the earth is bent to the proper angle from the vertical ($23^{\circ}.5$) and is inserted into a slot at the top of the rod supporting the earth. The moon can be moved up and down upon, and independently rotated about this rod. The base shows the position of the earth corresponding to the different months and seasons of the year. The positions of the earth at the time of the vernal and autumnal equinoxes and the summer and winter solstices are also given. The outside ring of numbers gives the angular deviation of any position of the earth from the autumnal equinox or the apparent deviation of the sun from the vernal equinox.

For compactness in transportation and storage, the entire system of globes can be rotated into a horizontal position by simply loosening the thumb-nut at the center of the base.
